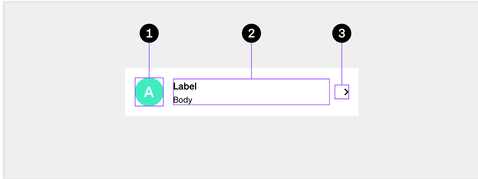
cell → Implementation

Anatomy

1. Asset Slot (optional)
2. Text Slot
3. Accessory Slot (optional)



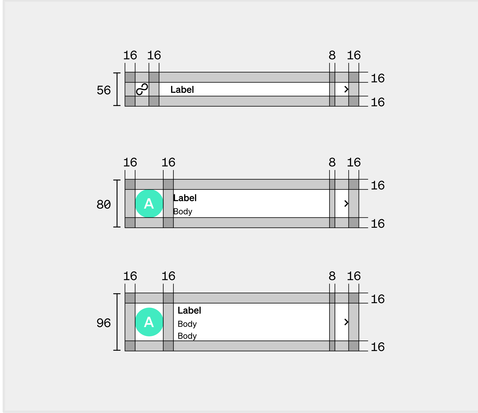
Size & spacing

Height (min): 56px

Height (max): N/A

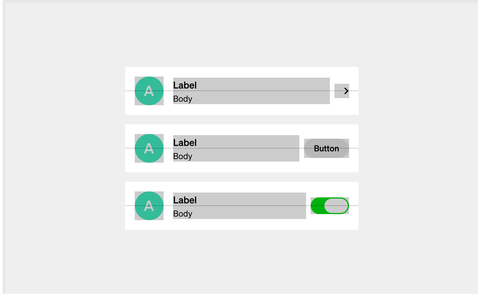
Width (min): parent width

Width (max): parent width



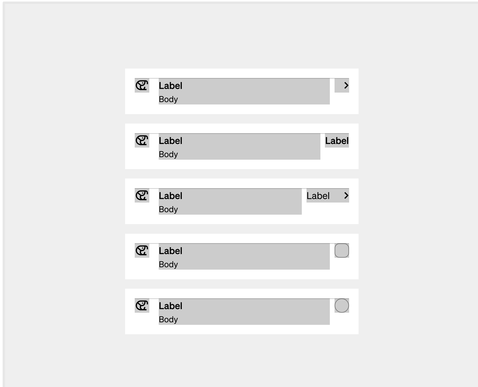
Vertical alignment

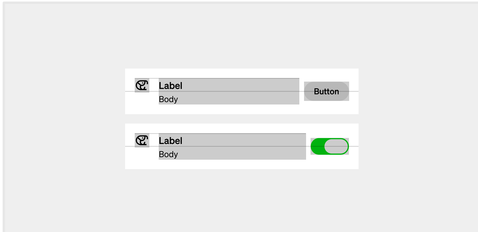
The default vertical alignment for the entire cell is centered.



In some use cases, however, it may be preferable to vertically align content to the top. This is especially the case with certain accessories, such as labels, labeled pushes, checkboxes, and radios. This can be achieved using autolayout properties.

When using an icon as an asset, it may also be preferable to use top alignment. Again, this can be achieved by using autolayout properties.





If an icon is used for the asset, and the accessory is a compact button or toggle, it's important to keep the accessory vertically centered.
